An Innovative Way to Teach Patients about the Care of Their Continent Urinary Diversions
Presented by Deborah Solomon, MSN, RN, ACNS, BC and Diane Cleary, BSN, RN, CMSRN, NE-C
During the 2016 Annual Convention

Summary: The education for continent urinary diversions is vital to the success of the procedure as it is a long process of recovery. There is a dearth of information and we developed patient education handouts, care paths and video play for our patients. All projects required an interdisciplinary team of shared governance council, management, Clinical Nurse Specialist, physician, art and photo, along with patient education department.

Nursing Implications:
• A multidisciplinary team is vital in coming up with innovative approaches to care.
• There is opportunity for testing to see if new approaches are effective.

Key Takeaways:
• Education is a key tool for nurses to use to help continent urinary diversion patients recover.
